The TYPAR® Weather Protection System is the most comprehensive lineup of Building Wraps, Flashings, Construction Tapes and accessories. All designed to work together to safeguard homes and structures – and deliver what no other name can: a lifetime limited warranty.

**Typar® BuildingWrap**
TYPAR BuildingWrap eliminates drafts in the wall, which helps reduce energy costs. Plus, the TYPAR® material itself will not support the growth of mold or disintegrate over time. And that means more confidence and fewer worries over the long haul. Install our complete system of TYPAR Building Wraps, Flashings, and Construction Tape and get the backing of a lifetime limited warranty.

**Typar® MetroWrap**
TYPAR MetroWrap® is engineered to ensure that when you’re building over four stories, you’re more than ready for the challenge. The product’s strengths make it a superior choice for defending multi-family dwellings, light commercial projects and large commercial structures.

**Typar® Flashings & Tape**
TYPAR® Flashings and Construction Tape aren’t mere accessories or support players. They’re integral components for assuring that building envelopes perform at peak levels. And, when used with the full TYPAR® Weather Protection System, they’re backed by a lifetime limited warranty:

- Typar® All-Temperature Flashing
- Typar® Flexible Flashing
- Typar® Butyl Flashing
- Typar® Construction Tape
Tybar® Weather Protection System

1. The Best Warranty in the Business
Only the complete Tybar® Weather Protection System offers the security of a 10-year limited warranty, covering the cost of labor and materials to correct a product failure.

2. The Best Balance of Water Holdout and Perm Rating
A weather barrier system’s effectiveness is measured by the combined performance of water holdout and perm rating. Tybar offers the best balance, which helps reduce moisture — and the problems associated with moisture — in wall cavities.

3. Unbeatable Tear Strength
A Tybar weather barrier withstands the rigors of the jobsite. Grab tensile strength is the preferred testing method for tear strength, and Tybar performs at more than twice the industry standard.

4. Optimal Moisture Vapor Transmission
The average home generates 3 to 6 gallons of moisture vapor each day, a lot of which dissipates into the wall cavities. Tybar delivers the ideal MVT rate, allowing moisture vapor to escape from the wall cavities, which helps significantly reduces the possibility of mold, mildew and water damage. Tybar weather barriers will not absorb or retain water either.

5. Superior Air Holdout
Tybar weather barriers significantly reduce air leakage through gaps, cracks or holds, resulting in better energy efficiency.

6. Excellent Surfactant Resistance
Tybar will not degrade over time due to surfactants. Tybar successfully resists cedar oil from siding and soaps from powerwashing.

7. Outstanding UV Performance
Ultraviolet stability is vital to the performance of a weather barrier before it’s covered. Even limited exposure to ultraviolet rays causes other weather barriers to deteriorate. UV inhibitors are in Tybar weather barriers’ coating as well as its fibers, providing the ultimate in UV protection.

8. High Slip Resistance
Tybar weather barriers offer a high co-efficient of friction against OSB board. Ladders are also less likely to slip when leaned against Tybar versus other competitive products.

9. Easy to Handle and Install
Tybar is less reflective than its biggest competitors and is less noisy.

10. A Total System for Your Needs
From the roof to the foundation, Tybar offers a complete line of weather resistant barriers for your applications: Tybar® HouseWrap, Tybar® StormWrap™ (for high wind), Tybar® MetroWrap™ (for commercial applications), Tybar RoofWrap® 30, plus construction tape and three kinds of flashing. All Tybar Weather Protection System components are backed by a limited 10-year warranty when installed properly and together as a system.

Quick Facts
Only the complete Tybar Weather Protection System offers the security of a limited warranty, covering the cost of labor and materials to correct a product failure.
